## PROJECTS

### • Online Maid Services - Academic Project

The project is about online maid booking, where clients may sign up or log in, schedule a maid for the services (home related services) they desire and select the time window for maid service.

The project is constructed with C#, ASP.NET and. MySQL.

### • Online Food Ordering System

The project is about placing online food orders. Authorization and Authentication are the initial stages of this project. Customers are free to order any dish they like. The activity parts of the modules are classified as Veg or Non-Veg and also include the desired locality for the consumer. May also cancel the order before seeing any notification on the website that the order is on its way.

This website was constructed with Python, Django Framework, Bootstrap and SQLite3.

### • User Authentication and Authorization

This project uses Authentication Views for User Authorization and Authentication. Contains Email Authentication for OTP Verification (UUID-based profile verification).

This website was created with Python, Django Framework and MySQL.

### • Diwali Sales Analysis

Data manipulation and cleaning are included in the project. Recognizing possible clients in various states, professions, age and gender categories.

Determining the product categories and items that sell the best.

Importing Pandas, Matplotlib, Seaborn Libraries to conduct Exploratory Data Analysis.
